

Q4

Quarterly Market Review Fourth Quarter 2024

2024 Q4 Market Review

The widely followed asset classes* were up in 2024, despite a lackluster Q4. 2024 was strong for stock markets and exceptionally strong for the Broad US markets (SP500), for a second year in a row.

The most significant event in Q4 for Americans was the US election. Of course the results are now known and investors are now digesting what the new administration will do and accomplish. Previous research over the past decades has shown that investment markets are agnostic to the President and the parties over the long term. But, near term speculation is a popular activity, and in my opinion it's quite unproductive for an investor focused on creating a secure retirement and legacy.

From our perspective as a professional investor, I think we are off to a good start with strong fundamentals (things like earnings, profitability, etc.), and optimism and hope on part of investors. Generally, it is optimism and hope that tend to fade first and fast, so I am attentive to that.

I think 2025 will be a reasonable year, especially for the US Stock market. I do expect it to be more muted than 2024 and 2023. After all, when you are at high-tide, you expect a low-tide and then a high-tide to follow. If investors remain vigilant, they can deal with both. Ditto navigating the investment markets. I think a steady hand is a good investment strategy; not so much a buy and ignore. And, despite my optimism, I remind myself to always stay aware and vigilant.

So rather than focus on short term imponderables, or "promises" like Crypto currencies or untested new technology like DeepSeek (get name by the way), our investment philosophy for high net worth investors with a long-term horizon remains steadfast: diversify portfolios over the main asset classes, keep a bias towards Equities, and keep a relentless focus on managing costs. We think this is a very feasible investment strategy to build assets and to ensure a comfortable retirement.

* Our Asset classes are: Cash, Fixed income, Equities, Real Estate, and Commodities and we think these pretty much cover the investable investment universe.

29 Jan 2025

Our evidence-based Investment Philosophy

We seek to double clients' wealth every 10-12 years and to do it without exposing portfolios to the risk of a permanent loss of capital. Our objective is to preserve the money you invest with us and to maintain its value over time. Of course, performance cannot be guaranteed, and past performance is not indicative of future results.

Our portfolios are sensibly diversified across the five main asset classes, and with markets becoming increasingly global, we seek opportunities regardless of where they are located.

We strive to manage investments prudently, using the value-style oriented approach of buying high quality investments when they are available at attractive (inexpensive) prices.

We select investments to get better total returns fully recognizing that risk management, cash requirements, tax considerations, social investing demand, etc. may reduce returns of portfolios.

We use both active and indexed portfolio management techniques depending on market conditions. When markets offer opportunities, or as we uncover compelling ideas, active portfolio management is useful. At other times our default position is to use evidence-based indexed investments.

We believe that market conditions are important, especially when clients add to or withdraw capital. At these times, we pay attention to market trends based on the relative attractiveness of major asset classes and our expectations about their future performance. But normally, we do not attempt to time the market; research suggests it is futile.

We use fundamental techniques, quantitative approaches, and behavioral finance to guide us when we buy and sell securities and strive to take the least amount of risk that is consistent with a client's objectives – as distinct from shooting for the highest returns.

How to Feel About Consumer Feelings

4th quarter 2024

Matt Lipps, CFA, Investment Strategist, Dimensional Fund Advisors

NEXT 12-MONTH US EQUITY PREMIUM AGAINST UNIVERSITY OF MICHIGAN CONSUMER SENTIMENT INDEX

December 1978–December 2023

Does your neighbor know where the economy is headed in the next 12 months? Since the 1960s, the University of Michigan has published the popular Consumer Sentiment Index, which asks everyday folk questions like: “Are you better off or worse off financially than you were a year ago?” or “Do you think that a year from now you will be better off financially, worse off financially, or just about the same as now?”¹ This index is sometimes viewed as a beacon of how investors feel about the direction of the economy.

As of September 30, 2024, the index sat at 70.1, pessimistic relative to its long-run average of 85.1.² Investors interpreting this as an ominous sign for markets may not have anything to fear though, as the data show this index has not been great at predicting future returns. Plotting the level of the Consumer Sentiment Index against subsequent 12-month stock market returns shows no discernible pattern, except that stocks tend to go up more often than they go down. Out of the 226 months where the sentiment index was below the long-run average, the average equity premium over the next year was 10.6%.

If your neighbor is feeling sour, that doesn't necessarily mean *you* should be changing your outlook or your investment portfolio. Markets tend to price in the latest views on the economy, including consumer optimism.
