

Q1

Quarterly Market Review

First Quarter 2026

Q1 2026 Review: heads AND tails

Q1 2026 was a reminder that financial markets rarely move in straight lines. U.S. and global equity markets (index: MSCI AC world) declined modestly. SP500 for example was down 4.3%. But, other asset classes – REITS and Commodities were up. Bonds (Bloomberg Agg bond index) were flat. Interestingly commodities (Bloomberg commodity index) were up an astonishing 24%. This divergence in different assets reinforces a core principle of sound portfolio construction: diversification matters and it is important to preserve wealth.

What made Q1 particularly interesting to me was that we witnessed an all-time high in US stocks (measured by the Dow and other important US equity indices) in January. And, later in the quarter, we witnessed the war in Iran and its impact on Oil prices and inflation, which was accompanied by a decline in US equity markets. This juxtaposition of positive and negative events in life is quite normal in our experience. It also provides an important investment lesson: History shows that it is folly to extrapolate fear; and it is also folly to extrapolate greed because it is the tug to the middle that tends to prevail.

Despite the discomfort of the current market volatility, we do not plan to veer off our overall strategy. For investors and certainly our clients with long-term horizons, we think waiting out the current turbulence makes the most sense. For our clients who are withdrawing money from their portfolio to generate retirement income, we allocate a calculated portion of their portfolio to safer and liquid investments. And, since one size does not fit all, our portfolios are customized to their needs.

Our current portfolios are well diversified across the main asset classes*. In equities, our carefully selected investments provide diversified exposure to hundreds of leading global companies across all the key economic sectors, across global financial markets and across all sizes from small to mega because no one knows where the future returns might come from. Thus, while our portfolios will move with market cycles, I'm confident they will grow as world economies prosper.

Our investment philosophy—disciplined, diversified, equity-oriented, and cost-conscious—has been effective across many market cycles. We believe it remains well suited to the current environment.

If recent events have raised questions about your portfolio, income strategy, or risk exposure, I do reach out. Periods like these are an appropriate time to revisit assumptions, confirm alignment with your goals, and make measured adjustments where needed. I am closely monitoring both markets and your portfolios, and I am available to discuss them.

*Asset classes: Cash, Fixed Income, Equities, Real Estate, and Commodities—covering the investable universe.

13 April 2026

Our evidence-based Investment Philosophy

We seek to double clients' wealth every 10-12 years and to do it without exposing portfolios to the risk of a permanent loss of capital. Our objective is to preserve the money you invest with us and to maintain its value over time. Of course, performance cannot be guaranteed, and past performance is not indicative of future results.

Our portfolios are sensibly diversified across the five main asset classes, and with markets becoming increasingly global, we seek opportunities regardless of where they are located.

We strive to manage investments prudently, using the value-style oriented approach of buying high quality investments when they are available at attractive (inexpensive) prices.

We select investments to get competitive total returns, fully recognizing that risk management, cash needs, tax considerations, and client-specific requirements, etc. may reduce returns of portfolios.

We use both active and cap-weighted portfolio management techniques depending on market conditions. When markets offer opportunities, or as we uncover compelling ideas, active portfolio management is useful. Our default position is to use evidence-based, cap-weighted investments.

We believe that market conditions are important, especially when clients add to or withdraw capital. At these times, we pay attention to market trends based on the relative attractiveness of major asset classes and our expectations about their future performance. But normally, we do not attempt to time the market; research suggests it is futile.

We use fundamental techniques, quantitative approaches, and behavioral finance to guide us when we buy and sell securities and strive to take the least amount of risk that is consistent with a client's objectives – as distinct from shooting for the highest returns.

Global Fixed Income

Yield curves, 1st Quarter 2026

Interest rates generally increased across global developed markets for the quarter.

Realized term premiums were negative across global developed markets, as shorter-term bonds generally outperformed longer-term bonds.

In Canada, Germany, UK, Australia and Japan, the intermediate- to longer-term maturity range remained upwardly sloped. In Canada and Germany, the short-term maturity range steepened. However, in Australia and the UK, the short-term maturity segment flattened and inverted, respectively.

Changes in Yields (bps) Since 12/31/2025

Dimensional Fund Advisors

MARKETS HAVE REWARDED DISCIPLINE

Growth of \$1—MSCI World Index (net dividends), 1970–2025

Wars such as the one unfolding in Iran are always disturbing. For investors, there's additional concern over whether these conflicts will spill over into their investment performance. But it's important for investors to be cautious about making asset allocation changes in response to such events.

Markets are forward-looking. Prices move in response to changes in information. When unexpected developments arise that investors deem to be poor for markets, markets often drop. But the flip side is markets always set prices for positive expected returns. Once the news gets reflected in market prices, investors can still expect positive returns even amid worrisome circumstances.

This is borne out in historical stock returns. Global equity markets have continued an upward climb even in the face of economic and political upheavals. We don't have to look far for illustrative examples. During the past few years, stock markets have had positive returns despite multiple wars being fought around the world.

This is not to trivialize the destruction wars bring and their impact on geopolitical risks. But history suggests investors may not help themselves by divesting from stocks. For long-term investors, the best bet is usually to stay the course.
