

Q2

Quarterly Market Review

Second Quarter 2026

Market Highs: Should you stay the Course? Q2 2026 Markets Review.

This review coincides with U.S.'s 250th birthday. And as Warren Buffett says 'never bet against America' is a very sound investment strategy.

In Q2 2026 all the major asset classes*, except commodities were up. And, all the asset classes were up for the first half of 2026. The US markets were strong performers, and overseas markets were not far behind. Bonds were flat and REIT's were up. But, the small were the mighty: both U.S. small caps and emerging market equities were the performance leaders, by far. Portfolios properly diversified across the major asset classes continue to be a sensible way to invest for the long term.

Many investors are fretting about the U.S. equities being "high"; and a natural but often unproductive conclusion they reach is "so they must crash". This may be temporarily true, but we think that the only way markets can go higher is to keep hitting new highs. After all, the Dow index has risen from around 60 (stet) about a hundred years ago to about 52,000 at the end of Q2 2026. Weathering temporary corrections is simply par for the course for a long-term investor who is keen to grow, protect, and bequeath their portfolio.

We do not plan to veer off our overall strategy. For investors and certainly our clients with long-term horizons, we think waiting out the current turbulence makes the most sense. For our clients who are withdrawing money from their portfolio to generate retirement income, we allocate a calculated portion of their portfolio to safer and liquid investments. And, since one size does not fit all, our portfolios are customized to their needs.

Our current portfolios are well diversified across the main asset classes*. In equities, our carefully selected investments provide diversified exposure to hundreds of leading global companies across all the key economic sectors, across global financial markets and across all sizes from small to mega because no one knows where the future returns might come from. Thus, while our portfolios will move with market cycles, I'm confident they will grow as world economies prosper.

Our investment philosophy—disciplined, diversified, equity-oriented, and cost-conscious—has been effective across many market cycles. We believe it remains well suited to the current environment.

If recent events have raised questions about your portfolio, income strategy, or risk exposure, do reach out. Periods like these are an appropriate time to revisit assumptions, confirm alignment with your goals, and make measured adjustments where needed. I am closely monitoring both markets and your portfolios, and I am available to discuss them.

*Asset classes: Cash, Fixed Income, Equities, Real Estate, and Commodities—covering the investable universe.
7 July 2026

Our evidence-based Investment Philosophy

We seek to double clients' wealth every 10-12 years and to do it without exposing portfolios to the risk of a permanent loss of capital. Our objective is to preserve the money you invest with us and to maintain its value over time. Of course, performance cannot be guaranteed, and past performance is not indicative of future results.

Our portfolios are sensibly diversified across the five main asset classes, and with markets becoming increasingly global, we seek opportunities regardless of where they are located.

We strive to manage investments prudently, using the value-style oriented approach of buying high quality investments when they are available at attractive (inexpensive) prices.

We select investments to get competitive total returns, fully recognizing that risk management, cash needs, tax considerations, and client-specific requirements, etc. may reduce returns of portfolios.

We use both active and cap-weighted portfolio management techniques depending on market conditions. When markets offer opportunities, or as we uncover compelling ideas, active portfolio management is useful. Our default position is to use evidence-based, cap-weighted investments.

We believe that market conditions are important, especially when clients add to or withdraw capital. At these times, we pay attention to market trends based on the relative attractiveness of major asset classes and our expectations about their future performance. But normally, we do not attempt to time the market; research suggests it is futile.

We use fundamental techniques, quantitative approaches, and behavioral finance to guide us when we buy and sell securities and strive to take the least amount of risk that is consistent with a client's objectives – as distinct from shooting for the highest returns.

Global Fixed Income

Yield curves, 2nd Quarter 2026

Interest rate changes were mixed across global developed markets for the quarter. In the US and Japan, interest rates increased. However, interest rates decreased in the UK, Germany, Canada, and Australia.

Outside of the US, realized term premiums were generally mixed across global developed markets. In the UK, Canada and Australia term premiums were positive. In Japan term premiums were negative.

In Canada, the yield curve remained generally upwardly sloped. In the UK, the short-term maturity range was relatively flat while the intermediate- to long-term maturity range remained upwardly sloped. In Germany, the short-term maturity range flattened while the intermediate- to long-term maturity range remained upwardly sloped. In Australia, the short-term maturity range inverted while the intermediate- to long-term maturity range remained upwardly sloped. In Japan, the yield curve remained generally upwardly sloped.

Still on Track for a Good Year

2nd Quarter 2026

Wes Crill, PhD, Senior Client Solutions Director and Vice President,
Dimensional Fund Advisors

S&P 500 INDEX YEAR-TO-DATE AS OF JUNE 5, 2026

I've said many times in this space that the secret to weathering market volatility is leaving your account statements unopened more often. This may have saved many investors from downing the antacids last Friday.

The S&P 500 Index dropped 2.63% on June 5, placing it among the worst of the index's daily returns over the past 30 years.¹ That stinks. But what doesn't stink is zooming out and seeing how strong the index's performance has been. A cumulative return of 8.4% is a good start to the year considering the longer-term annualized return has been 10.6%.²

Most of us would have gladly signed up in advance for that type of performance over the first 112 trading days of 2026, especially if accompanied by the knowledge that we'd have an ongoing war as a backdrop. The ride has been bumpy, but that's what distracts from the long-term view. If we had received the same cumulative return at a constant, smoothed delivery, imagine how thankful stock investors would be. And remember, tolerating the bumps is part of what earns you the equity premium.

So, sit back, ignore those pesky market update emails,³ and focus your attention on more important things, like catching up on *Widow's Bay* episodes.

Still on Track for a Good Year

(continued from page 15)

Past performance is not a guarantee of future results. Actual investment returns may be lower.

1. Based on daily returns from June 10, 1996, to June 5, 2026.
2. Cumulative return is as of June 5, 2026. Long-term annualized return covers the period from January 1, 1996, to May 31, 2026.
3. Except *Above the Fray*.

Glossary

Equity premium: The return difference between stocks and a risk-free asset, such as short-term Treasury bills.
